

The quick brown fox jumps over the lazy dog, again and again, across many otherwise unremarkable paragraphs that exist only to give this test document a realistic body margin to measure against.

A second paragraph follows, still flush against the very same left margin as the first, the way ordinary prose in an ordinary book always does, page after page after page.

And a third, for good measure, so the statistics are not thrown off by having too few lines of plain body text to outweigh anything else.

Key Terms for Data Types

Numeric

Data that are expressed on a numeric scale.

Continuous

Data that can take on any value in an interval.

Discrete

Data that can take on only integer values, such as counts.

Categorical

Data that can take on only a specific set of values.

Binary

A special case of categorical data with just two categories.

Ordinal

Categorical data that has an explicit ordering.

Example Code

```
import pandas as pd

def load(path):
    df = pd.read_csv(path)
    return df.dropna()
```

A closing paragraph after the code sample, to confirm normal prose continues to reflow exactly as it always has.
